

COVID-19 Protection Measures for Experiments at Research Division Cartography

- If you feel sick or have any symptoms of sickness, please do not come to participate in the experiment.
- Please register with TU Wien's access management system and wear a FFP2-mask when entering the building.
- Disinfectant and new FFP2-masks are available at the experiment location.
- Only the experiment supervisor and the participant are at the premises of the research group at the time of the experiment. Whenever these two persons are in a room together, masks must be worn by both and a distance of $\geq 2\text{m}$ must be kept.
- Before and after each experiment, the lab rooms are ventilated by opening the windows.
- Before and after each experiment, all surfaces potentially touched by the participant (tables, chairs, devices, phone etc.) are disinfected.
- During the experiment, participants are on their own in the lab room. While being alone in the room, participants may take off their FFP2-mask during the experiment.
- For questions during the experiment, a phone is provided to call the experiment supervisor. If the supervisor needs to enter the lab room, both persons need to wear a FFP2-mask before entering.
- In the case of technical difficulties that cannot be resolved while keeping a distance of 2m, the experiment is aborted and the problems are assessed after ventilating the room.
